

Professional Summary

- 5+ years of experience as a **DevOps Engineer** and **Azure Cloud Engineer**, with exposure to **Site Reliability Engineering (SRE)** practices across various domains.
- Primarily worked with **Microsoft Azure** to provision, manage, and optimize cloud infrastructure while supporting **hybrid cloud environments**.
- Built and maintained **CI/CD pipelines** using **Azure DevOps** and **Jenkins** to automate application **build, test, and deployment** processes across development, QA, and production environments.
- Provisioned and managed core **Azure Infrastructure Services** including **Virtual Machines (VMs)**, **Virtual Networks (VNETs)**, **Storage Accounts**, **Load Balancers**, and related cloud resources.
- Implemented **Infrastructure as Code (IaC)** using **Terraform** and **ARM Templates** to deploy scalable, repeatable, and version-controlled environments.
- Deployed and managed **containerized applications** using **Docker**, **Azure Kubernetes Service (AKS)**, and **Helm Charts** to improve scalability, availability, and deployment efficiency.
- Developed automation solutions using **Python**, **Bash**, and **PowerShell** for infrastructure provisioning, deployments, and operational tasks.
- Implemented monitoring, logging, and alerting solutions using **Azure Monitor**, **Prometheus**, and **Grafana** to ensure system reliability and performance.
- Supported **SRE operations**, including **incident management**, **root cause analysis (RCA)**, **post-incident reviews**, and continuous reliability improvements.
- Applied **Configuration Management** practices using **Ansible** to maintain consistent server configurations and application deployments.
- Managed source code repositories using **Git** and **GitHub**, following **branching strategies**, **code review processes**, and collaborative development practices.
- Configured **Identity and Access Management (IAM)** using **Azure Active Directory (Azure AD)** and **Role-Based Access Control (RBAC)** to enforce security and governance standards.
- Provided **production support**, participated in **on-call rotations**, documented deployment procedures, and collaborated with release management teams to meet **SLAs** and ensure successful production releases.

Technical Skills

Cloud Platforms	Microsoft Azure (Virtual Machines, Virtual Networks, Azure Blob Storage, Azure Active Directory, Azure Kubernetes Service (AKS), Azure Load Balancers, Azure Monitor, Log Analytics), Azure DevOps (Pipelines, Repos, Artifacts), Azure App Services
Containerization & Orchestration	Docker, Kubernetes (AKS), Docker Swarm, Docker Compose
Configuration Management & Automation	Ansible, Terraform, Jenkins, Maven
Version Control & CI/CD	Git, GitHub, Azure Repos, Azure DevOps, Jenkins, SonarQube, Maven
Scripting & Programming Languages	Python, PowerShell, Terraform, ARM Templates, Bicep
Monitoring & Logging	Azure Monitor, Prometheus, Log Analytics, SonarQube
Operating Systems	Red Hat Enterprise Linux (RHEL), Ubuntu, Windows Server
Web & Application Servers	Apache Tomcat, Nginx
Identity & Access Management (IAM)	Azure Active Directory (Azure AD), Azure RBAC (Role-Based Access Control)

Network & Security	Virtual Networks (VNet), Subnets, Network Security Groups (NSG), Azure DDoS Protection, Azure Firewall, Azure Application Gateway (WAF), Azure Bastion, Azure VPN Gateway (Site-to-Site & Point-to-Site), ExpressRoute, Service Endpoints, Private Link, Azure Security Center
DevOps & Infrastructure	Infrastructure as Code (IaC), CI/CD Pipelines, AKS Administration, Cloud Automation, Container Management

Professional Experience

TD Bank, Toronto, ON

Oct 2024 – Present

Azure Cloud Engineer

- Provisioned and managed Azure infrastructure resources including Virtual Machines, Virtual Networks, Storage Accounts, and Load Balancers to support critical banking applications and ensure smooth operations.
- Built Azure infrastructure using various resources such as Virtual Networks (VNet), Azure Virtual Machines (VMs), Azure Blob Storage, Azure AD, and Managed Disks.
- Automated testing and deployment processes using GitHub, Jenkins, Ansible, and Docker.
- Worked with Ansible for configuration management and infrastructure automation, ensuring consistent environments across development, QA, and production.
- Deployed, monitored, and maintained workflows using Jenkins, GitHub, and Ansible for seamless integration and delivery pipelines.
- Managed version control by creating branches in GitHub and Subversion for parallel development processes.
- Utilized Jenkins for Continuous Integration (CI) to automate build processes and ensure quick feedback on code changes.
- Developed Powershell scripts to automate backend processes and integrate with Ansible for deployment automation.
- Managed and secured Azure Blob Storage containers, setting appropriate policies to protect sensitive code and assets.
- Used Kubernetes (AKS) for orchestrating the deployment, scaling, and management of Docker containers in Azure.
- Extensively worked with Jenkins for end-to-end automation of builds and deployments, streamlining the CI/CD pipeline.
- Built and maintained CI/CD pipelines using Azure DevOps and Jenkins to automate application builds, testing, and deployments across multiple environments.
- Configured and administered Azure Kubernetes Service (AKS) clusters to run containerized microservices with features such as auto-scaling and high availability.
- Automated infrastructure provisioning and updates using Terraform and ARM templates to create consistent and repeatable cloud setups.
- Developed Python, Bash, and PowerShell scripts to automate various operational tasks including resource provisioning, backups, and configuration changes.
- Implemented monitoring and alerting solutions with Azure Monitor, Prometheus, and Grafana to track performance and quickly respond to issues.
- Managed Docker container images and used Helm charts within Azure DevOps pipelines for reliable application deployments.
- Supported Git repository management with proper branching strategies, merging, and collaboration practices for development teams.
- Handled SRE responsibilities including incident response, root cause analysis of production issues, and reliability improvements.
- Applied Ansible playbooks to perform configuration management and keep Azure servers and applications consistent across environments.
- Provided on-call support and maintained detailed documentation of deployment processes to help meet service level agreements.
- Configured Azure AD RBAC policies to manage secure access and permissions for users and applications in the Azure environment.

Environment: Azure (AKS, Virtual Machines, Virtual Networks, Azure AD, Load Balancers, Monitor, Logic Apps, Azure DevOps), Docker, Kubernetes, Terraform, Ansible, Jenkins, Git, Python, Bash, Prometheus, Grafana, ELK Stack, Linux.

Azure/DevOps Engineer

- Collaborated with the DevOps team to manage and deliver releases into the production environment, working closely with project teams and utilizing tools such as Docker, Kubernetes.
- Created and configured Azure Recovery Services, including setting up Key Vaults, storage redundancies, generating custom-managed keys for encryption, managing Azure recovery services, moving them across subscriptions, and configuring notifications for backup alerts and usage monitoring.
- Utilized key Azure services, including Azure Security Center, Virtual Machines, Virtual Networks, Network Security Groups (NSG), Application Gateways, Load Balancers, Storage Accounts, Azure Active Directory (AD), RBAC, and Recovery Services Vault, for effective cloud infrastructure management.
- Planned and migrated Azure Storage for document and media files, using Blob Storage, Table Storage for structured data, Queue Storage for messaging workflows, and File Storage for file sharing.
- Implemented Azure AD with AD Connect, configured Single Sign-On (SSO), multifactor authentication, and managed AD synchronization for improved identity management.
- Configured Azure External Load Balancers to expose virtual machines and services within Virtual Networks to the Internet.
- Configured and monitored Azure Application Gateway, Traffic Manager, and Azure Firewall for secure and resilient traffic management.
- Set up and administered Azure resources such as Virtual Machines, Virtual Networks, Storage Accounts, and AKS clusters to support various insurance application platforms.
- Developed CI/CD pipelines with Azure DevOps to automate the full cycle of application builds, tests, and deployments.
- Deployed and scaled containerized applications on Azure Kubernetes Service (AKS) to improve flexibility and reliability of microservices.
- Used Terraform to define and provision infrastructure mainly in Azure environments for different projects.
- Wrote automation scripts in Python and Bash to streamline deployment processes and daily operational configuration tasks.
- Configured monitoring dashboards and alerts using Azure Monitor, Prometheus, Grafana, and ELK Stack to maintain good visibility into system performance.
- Participated in SRE activities including incident management, post-incident reviews, and efforts to improve overall system reliability.
- Managed version control repositories in GitHub following standard branching and merging strategies for team development.
- Automated application deployments to servers using Maven builds and Jenkins pipelines.
- Implemented Azure AD RBAC to handle user access and security policies across cloud resources.
- Configured Virtual Network peering to establish secure connectivity between different environments.
- Created Ansible playbooks to automate server configuration and application deployment tasks.
- Optimized Linux servers running CentOS and Ubuntu to improve performance and resource usage in Azure production environments.
- Supported production releases with proper documentation and participated in on-call rotation to resolve issues quickly.
- Worked on version control systems like Git and Azure Repos, utilizing source code management tools such as GitBash, GitHub, Git GUI, and command-line applications.
- Automated CI/CD pipelines using Azure DevOps, integrating Git, Jenkins, Docker Registry/Daemon.
- Worked on azure resources reservations and reduced project cost. Also helped on suggesting to use the right resource for right requirement.
- Utilized Docker for containerizing and deploying applications, storing build artifacts in Azure DevOps Artifacts for future releases. Worked on other Kubernetes components such as ingress, service, pv, pod identity, hpa, vpa etc.
- Converted existing Terraform modules to ARM templates to improve control and scalability in Azure.
- Developed PowerShell scripts to automate Azure services, including web servers, load balancers, Azure CDN, databases, and security group configurations.
- Configured Azure Key Vault to securely store and manage access to credentials, secrets, and encryption keys.

Environment: Azure (AKS, Virtual Machines, Virtual Networks, Azure AD, Load Balancers, Monitor, Synapse, Logic Apps, Azure DevOps), Docker, Kubernetes, Terraform, Ansible, Jenkins, Git, Python, Bash, Maven, Prometheus, Grafana, Splunk, Linux.

DevOps Engineer / Azure Cloud Administrator

- Built Azure infrastructure using various resources such as Virtual Networks (VNet), Azure Virtual Machines (VMs), Azure Blob Storage, Azure AD, and Managed Disks.
- Automated testing and deployment processes using GitHub, Jenkins, Ansible, and Docker.
- Worked with Ansible for configuration management and infrastructure automation, ensuring consistent environments across development, QA, and production.
- Deployed, monitored, and maintained workflows using Jenkins, GitHub, and Ansible for seamless integration and delivery pipelines.
- Managed version control by creating branches in GitHub and Subversion for parallel development processes.
- Utilized Jenkins for Continuous Integration (CI) to automate build processes and ensure quick feedback on code changes.
- Developed Powershell scripts to automate backend processes and integrate with Ansible for deployment automation.
- Managed and secured Azure Blob Storage containers, setting appropriate policies to protect sensitive code and assets.
- Used Kubernetes (AKS) for orchestrating the deployment, scaling, and management of Docker containers in Azure.
- Extensively worked with Jenkins for end-to-end automation of builds and deployments, streamlining the CI/CD pipeline.
- Provisioned Azure infrastructure components including Virtual Machines, Storage Accounts, Virtual Networks, and other related services for client projects.
- Built CI/CD pipelines using Jenkins, GitHub, and Maven to support automated application build and deployment processes.
- Configured Ansible to automate infrastructure setup and application deployment tasks on Azure resources.
- Managed Docker containers and deployed applications on Azure Kubernetes Service (AKS) for better scalability.
- Developed Python and Bash scripts to automate common deployment and maintenance activities in the Azure environment.
- Set up monitoring solutions with Azure Monitor and Grafana to track application and infrastructure performance.
- Handled GitHub repositories and implemented branching strategies to support collaborative development work.
- Deployed applications to Apache Tomcat servers and automated builds through Jenkins pipelines.
- Configured Azure AD RBAC policies to manage secure access for users and resources.
- Used Terraform to provision and manage Azure infrastructure as code for different projects.
- Integrated SonarQube with Jenkins to perform automated code quality checks during development.
- Created Ansible playbooks to handle configuration management and updates across multiple environments.
- Administered Jenkins servers including installations, upgrades, backups, and user access management.
- Configured Azure Load Balancers and auto-scaling features to support high availability of applications.
- Set up ELK Stack for centralized logging to help with troubleshooting and visibility of application issues.
- Optimized Linux server settings on CentOS and Ubuntu to achieve better performance and stability.

Environment: Azure (Virtual Machines, Virtual Networks, Storage Accounts, AKS, Azure AD, Load Balancers, Monitor, Azure DevOps), Docker, Kubernetes, Terraform, Ansible, Jenkins, Git, Maven, Grafana, Python, Bash.

Education:

Bachelor's in Computer Applications from Kakatiya University, India.

Work Authorization:

Permanent Resident of Canada.
